Attachments: SM_Audit_Report.csv

- 1) Please ensure that snapshots on both source and destination volumes are released/cleaned-up for all Broken-off Relations.
- 2) For Relations which are IDLE/Snapmirrored ensure that the Lag is under 150Hrs. In case the LAG is more, review the reason for huge LAG and do one of the following.
 - a) Run a manual SnapMirror Update (if the relationship is still valid).
 - b) Break the relation and clean up the SnapMirror snapshots (if the relation is no longer valid).
- 3) Review the Migration Tracker to identify any ongoing migrations related to Tech Refresh, Thin Mitigation, DCR's and take necessary action.
